

# UFO SCAVENGER HUNT CLUE BOARD

Read the space fact and unscramble the pink letters to spell out the name of a park. On the back, write the park name next to its corresponding # and use visual clues to find the item left behind.

1. The Milky Way galaxy is 105,700 light-years wide. It would take a modern spacecraft 450,000,000 years to travel to the center of our galaxy!

Park

2. Pluto is smaller than the United States. If you were to walk around the equator of Pluto it would be the same distance as driving from Fairbanks to Tampa, Florida!

Park

3. There are more stars in space than there are grains of sand in the world. There are 10 times more stars in the night sky than grains of sand on the Earth, with 70 sextillion stars being visible from Earth through a telescope. 70 sextillion is written out like this: 70,000,000,000,000,000,000.

4. Only 5% of the universe is visible from Earth. 68% of the universe is dark energy and 27% is dark matter. Both of these are invisible, even with a telescope, which means we are only able to see 5% of the universe.

5. Space is completely silent. This is because there is no air in space, and air is needed to carry the sound vibrations. So if you shouted to someone next to you in space they wouldn't be able to hear you.

Park

6. There is a planet half the radius of the Earth with a surface made up of diamonds. 55 Cancri-e and it is only 40 light-years away and visible to the naked eye under the constellation of Cancer.
